Geography Curriculum intent

The aim of the geography curriculum is to produce high achieving and ambitious citizens of the future. This is achieved by students experiencing a wide breadth of physical and human geography topics that allow them to be inquisitive of the natural world and the processes that shape it. Furthermore, students will also understand and empathise with people from all levels of development and study how physical landscapes and human development are interdependent.

Students will learn detailed knowledge of physical and human geography, develop their understanding and levels of terminology and be able to apply this using precise and relevant geographical skills.

Hall Park geography equips young people with the keys to the future and aims to deliver key messages of human progress, sustainability, career possibilities and a bright future for society.
